

UNIVERSITY ADMIT ELIGIBILITY PREDICTOR

INSTALL ANACONDA

Team ID	PNT2022TMID13278
Project Name	University Admit Eligibility Predictor

Installing on Windows

Note

Using Anaconda in a commercial setting? You may need to purchase a license to stay compliant with our [Terms of Service](#). This can be accomplished through [Anaconda Professional](#), [Anaconda Server](#), or [Anaconda Enterprise](#). If you have already purchased Professional, please proceed to the [Authenticating Anaconda Professional](#) section after completing your installation here.

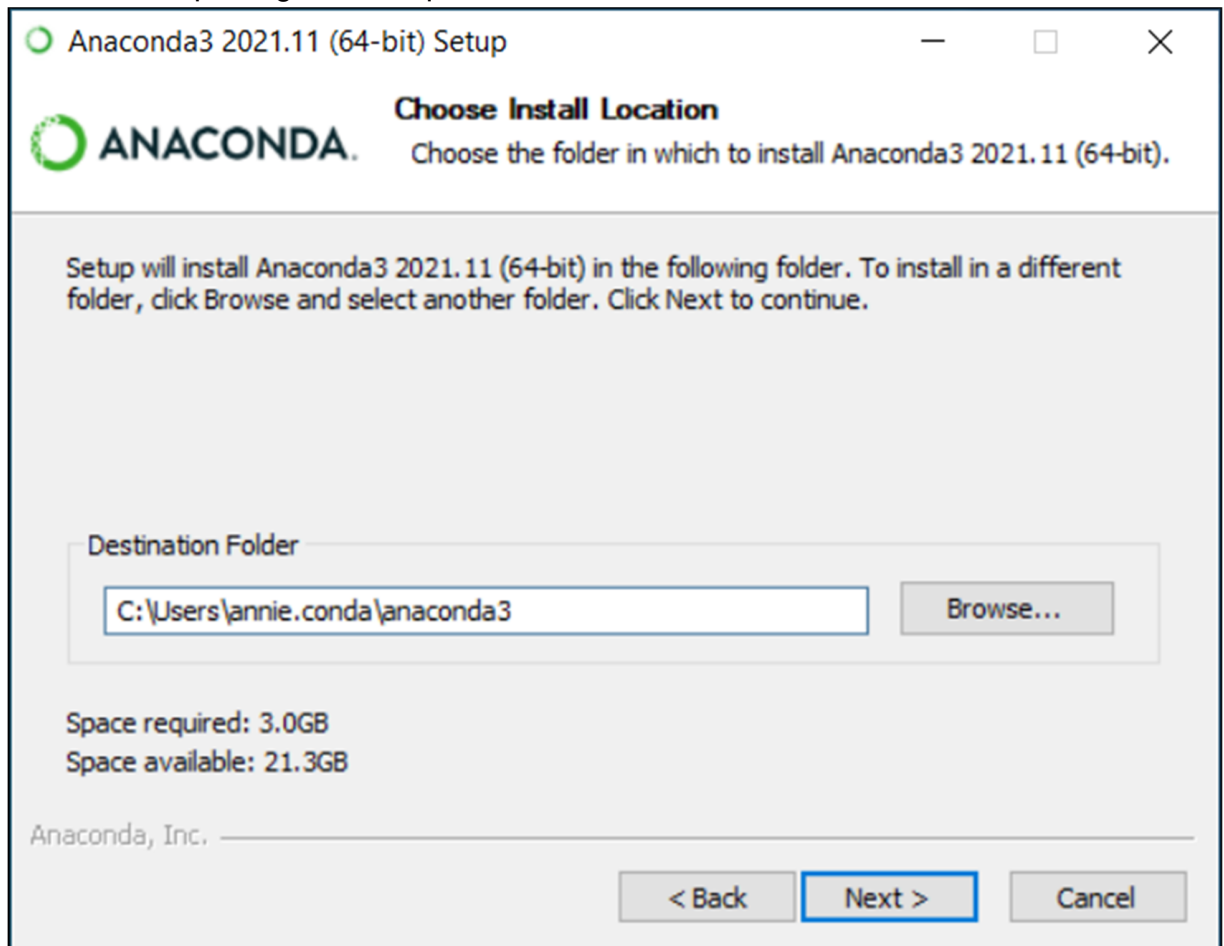

Haven't purchased Anaconda Professional yet? Visit <https://anaconda.cloud/register> to get started.

1. Download the Anaconda installer.
2. Go to your Downloads folder and double-click the installer to launch. To prevent permission errors, do not launch the installer from the Favourites folder.

If you encounter issues during installation, temporarily disable your anti-virus software during install, then re-enable it after the installation concludes. If you installed for all users, uninstall Anaconda and re-install it for your user only.

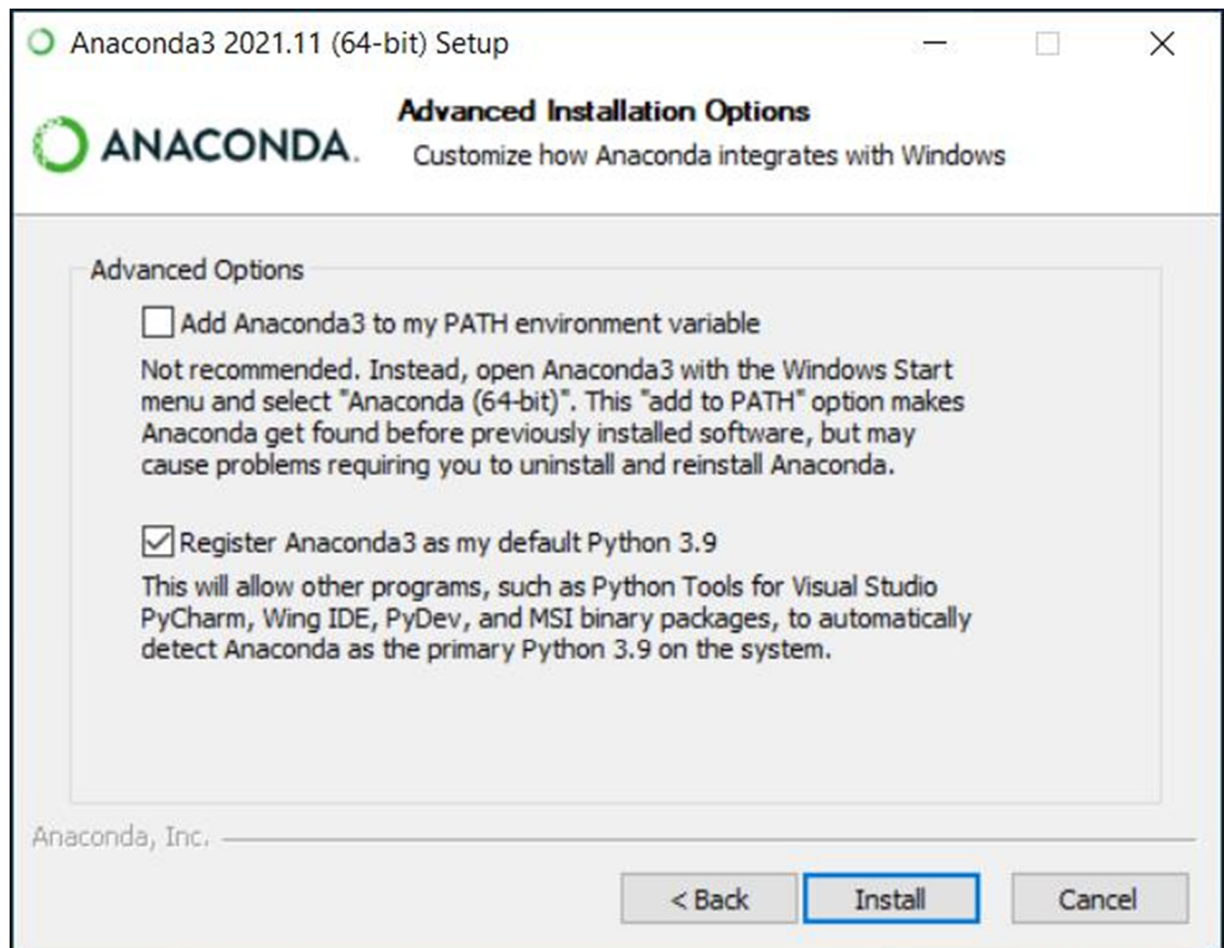

3. Click Next.
4. Read the licensing terms and click I Agree.
5. It is recommended that you install for Just Me, which will install Anaconda Distribution to just the current user account. Only select an install for All Users if you need to install for all users' accounts on the computer (which requires Windows Administrator privileges).

6. Click Next.
7. Select a destination folder to install Anaconda and click Next. Install Anaconda to a directory path that does not contain spaces or Unicode characters. For more information on destination folders, see the FAQ. Do not install as Administrator unless admin privileges are required.

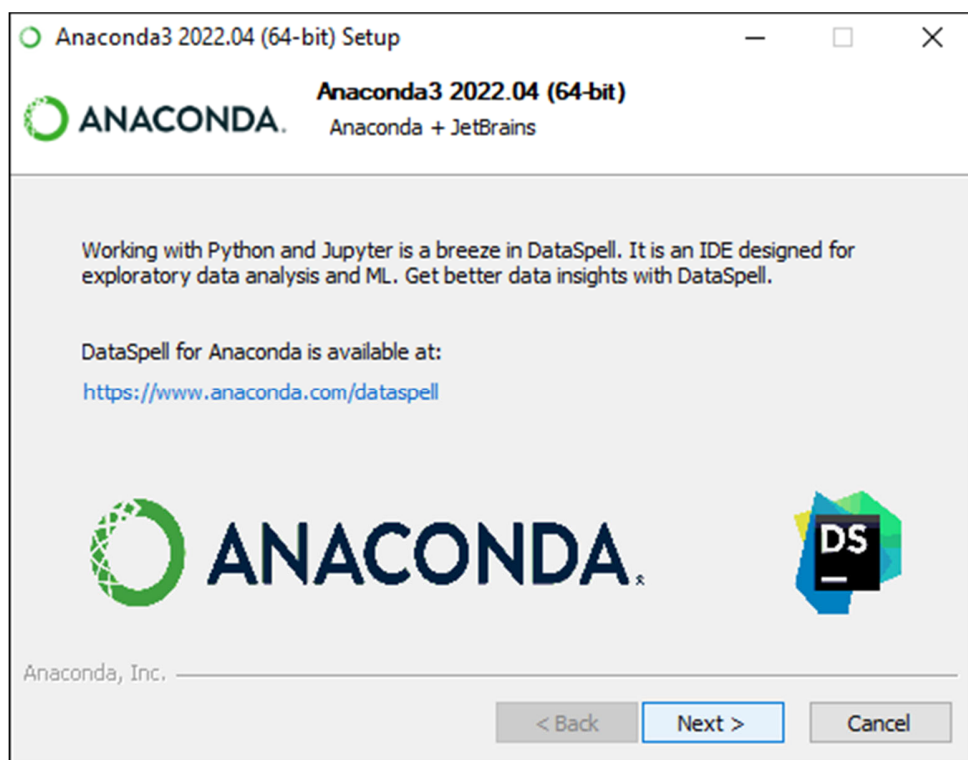

8. Choose whether to add Anaconda to your PATH environment variable or register Anaconda as your default Python. We don't recommend adding Anaconda to your PATH environment variable, since this can interfere with other software. Unless you plan on installing and running multiple versions of Anaconda or multiple versions of Python, accept the default and leave this box checked. Instead, use Anaconda software by opening Anaconda Navigator or the Anaconda Prompt from the Start Menu.

As of `Anaconda Distribution 2022.05`, the option to add Anaconda to the PATH environment variable during an All Users installation has been disabled. This was done to address a security exploit. You can still add Anaconda to the PATH environment variable during a Just Me installation.

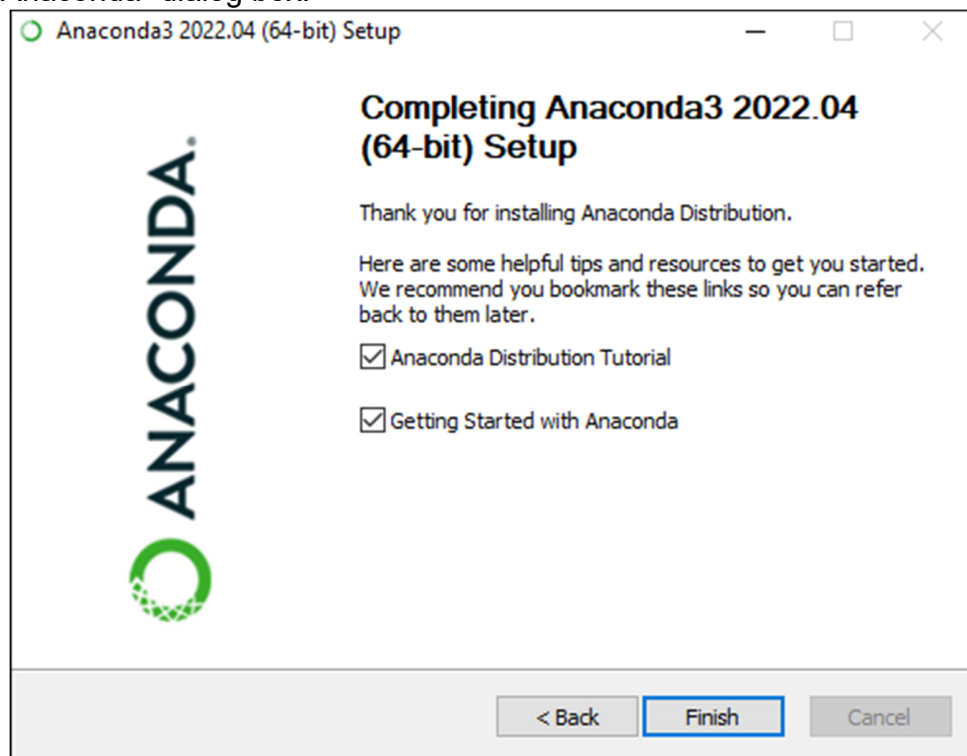

9. Click Install. If you want to watch the packages Anaconda is installing, click Show Details.
10. Click Next.

Optional: To install Data spell for Anaconda, click <https://www.anaconda.com/dataspell>. Or to continue without Data spell, click Next.

11. After a successful installation you will see the “Thanks for installing Anaconda” dialog box:

12. If you wish to read more about Anaconda.org and how to get started with Anaconda, check the boxes “Anaconda Distribution Tutorial” and “Learn more about Anaconda”. Click the Finish button.
13. [Verify your installation](#).
